Test Automation: Yes You Need It

…and yes you're doing it wrong

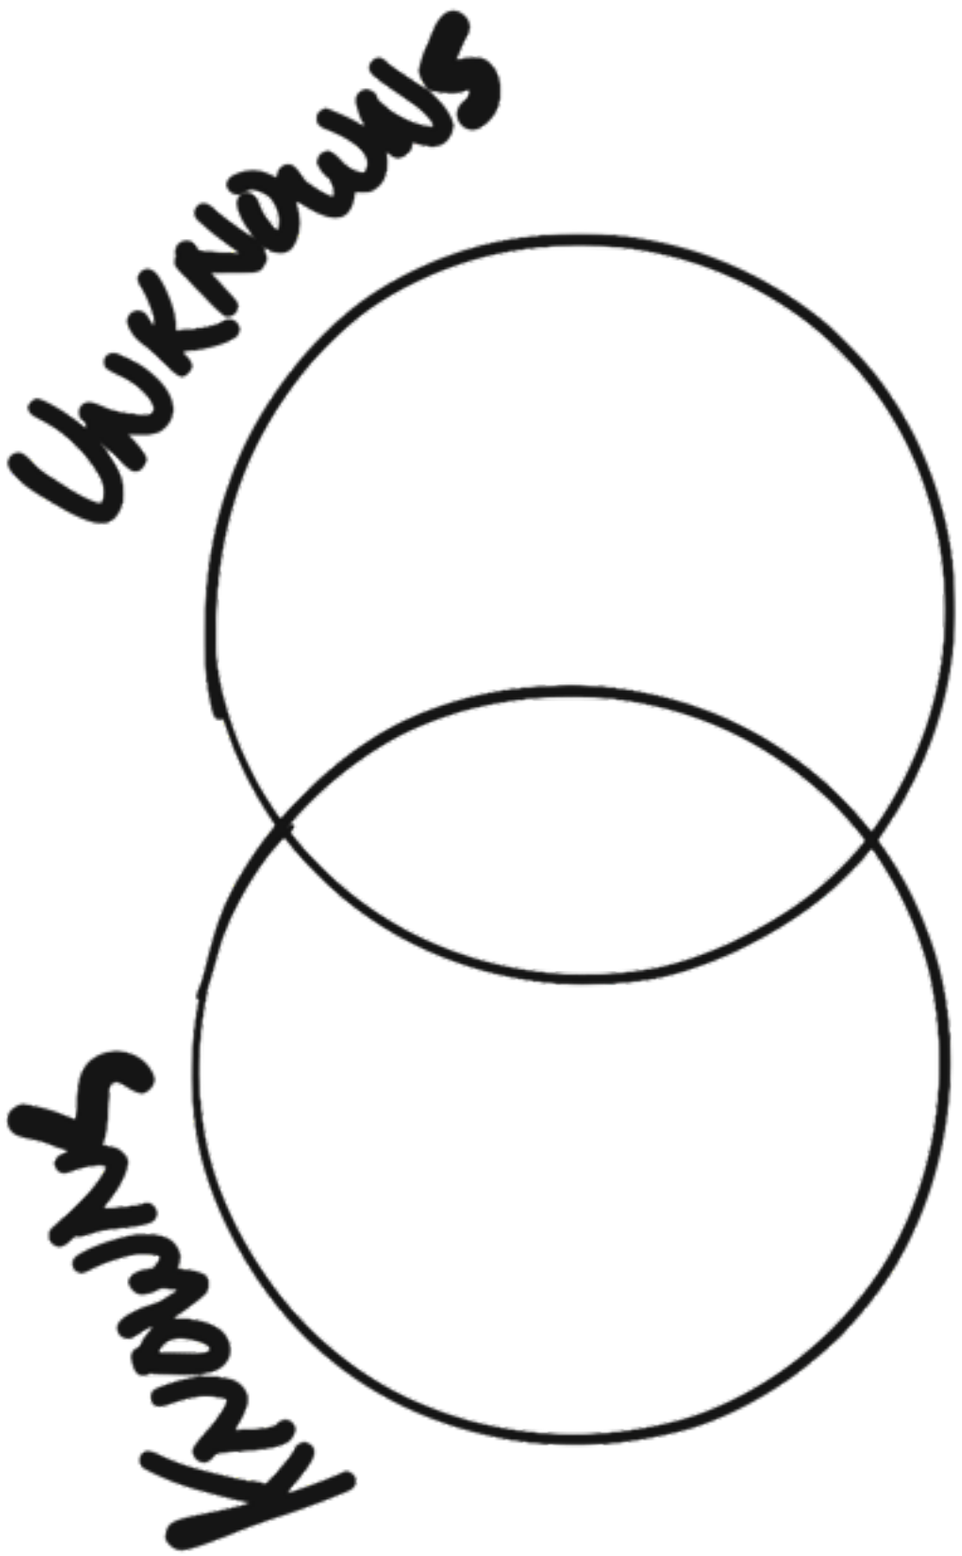
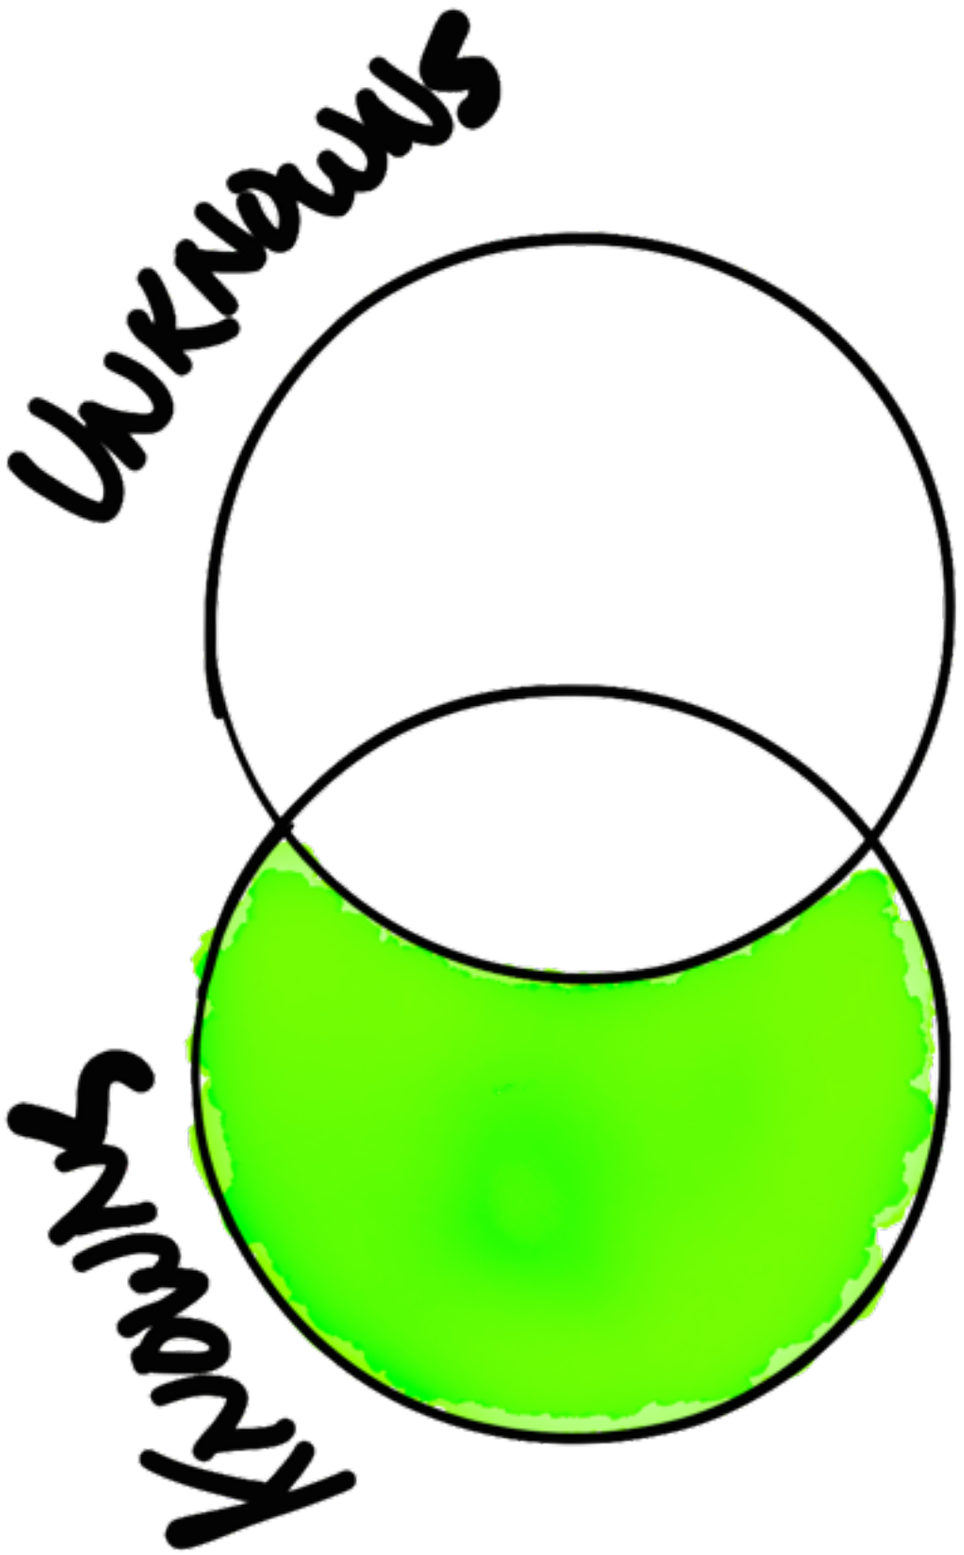
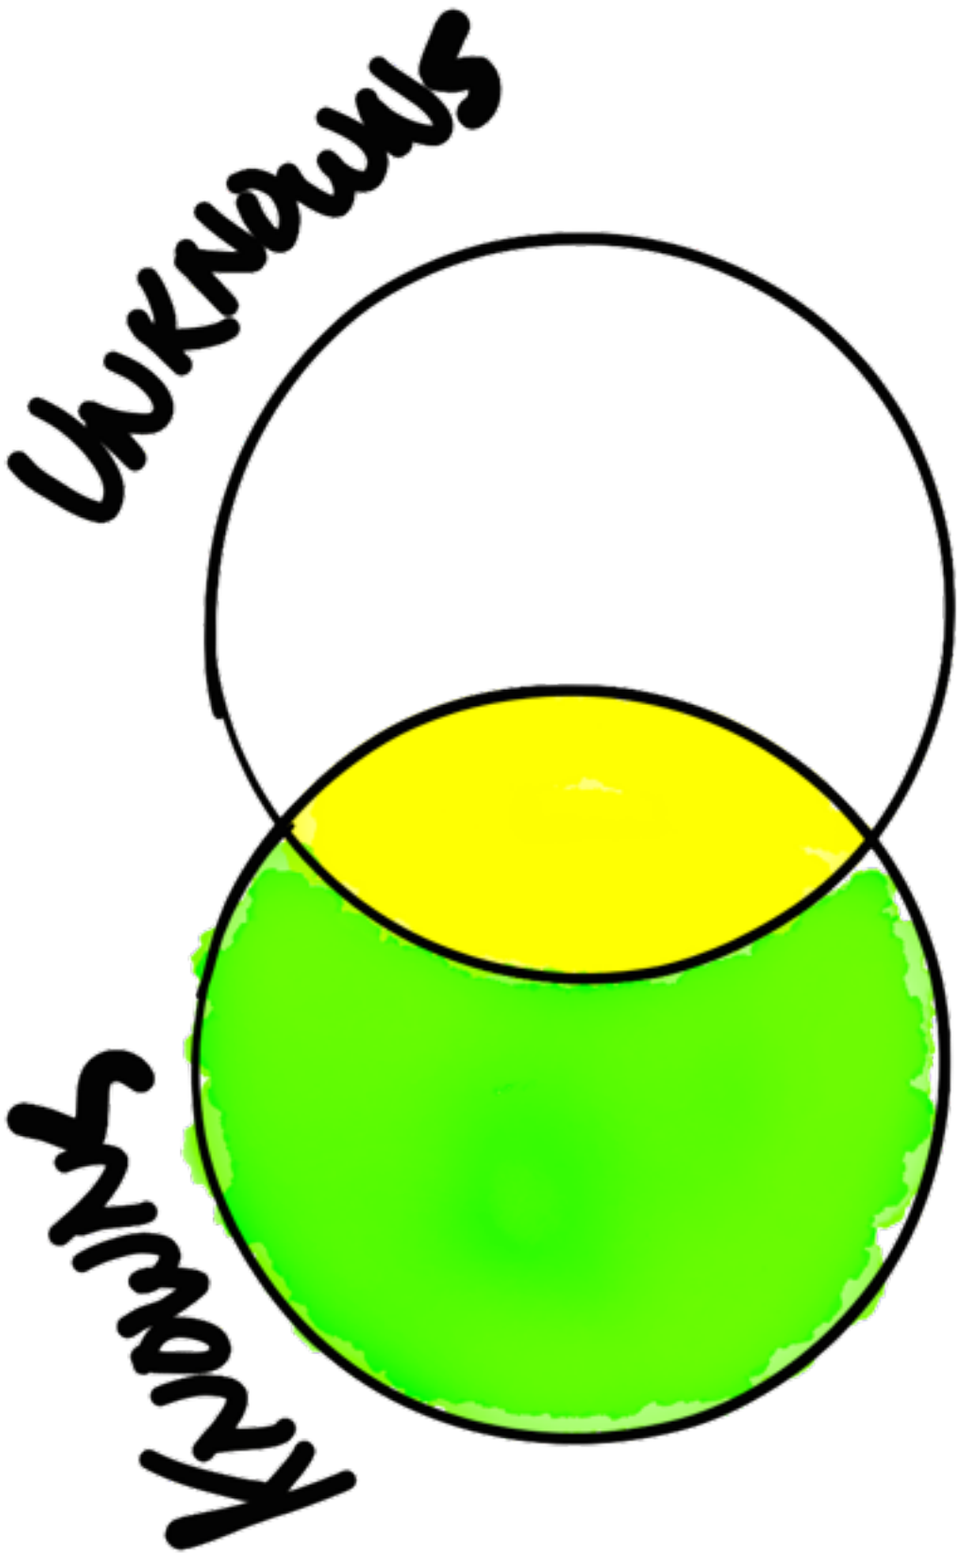
Let's Talk About Risk



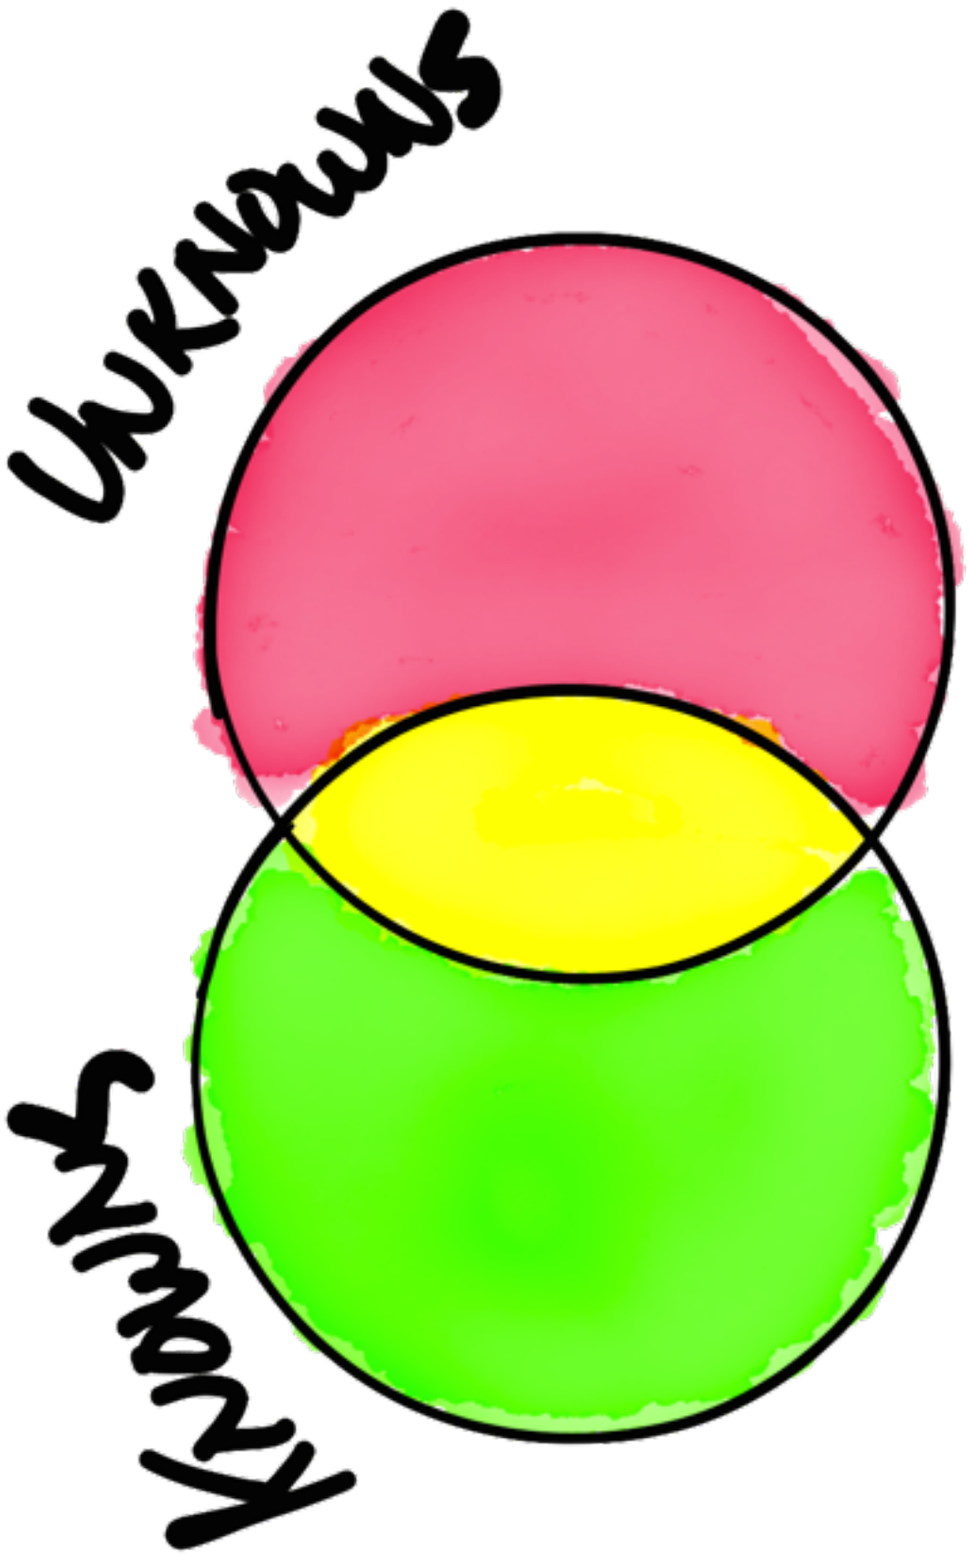
Known-Known



Known-Unknown



Unknown-Unkonown



“Reports that say that something hasn't happened are always interesting to me, because as we know, there are known knowns; there are things we know we know. We also know there are known unknowns; that is to say we know there are some things we do not know. But there are also unknown unknowns – the ones we don't know we don't know. ***And if one looks throughout the history of our country and other free countries, it is the latter category that tend to be the difficult ones.***”

Donald Rumsfeld

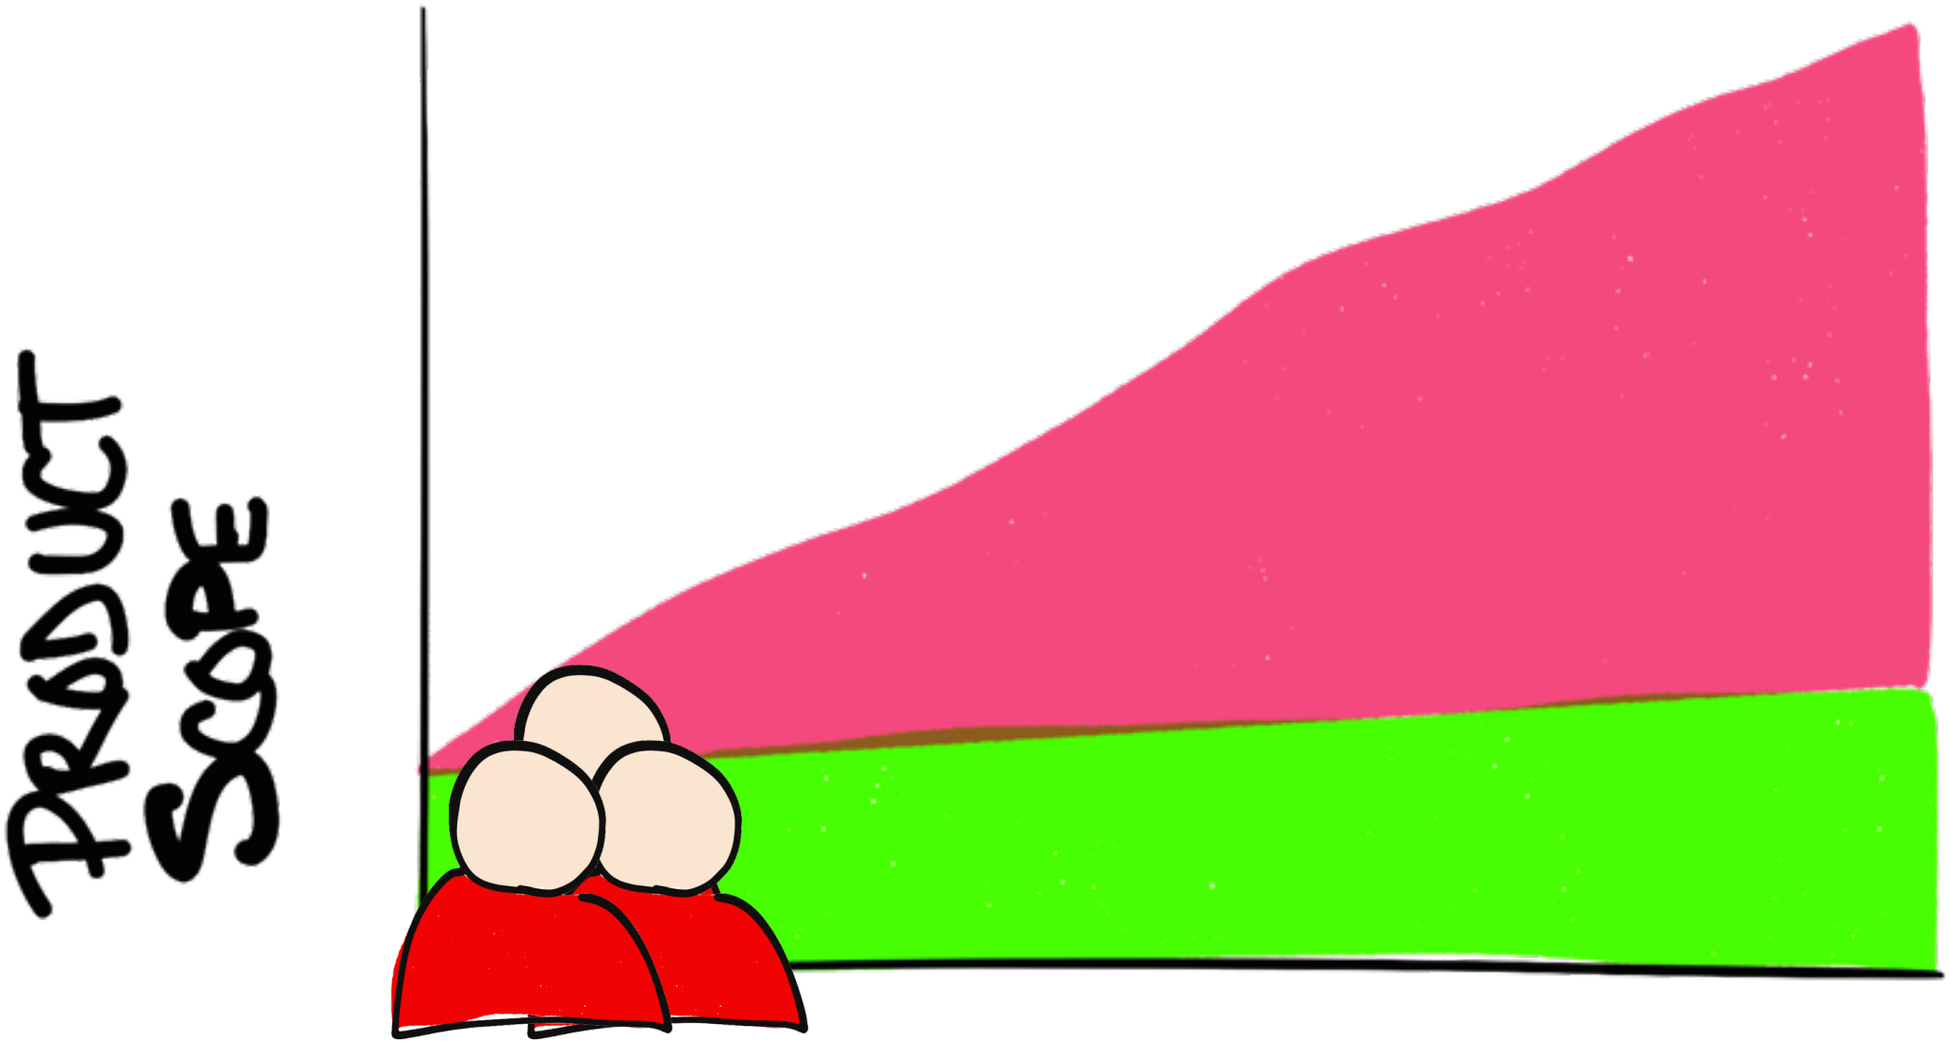
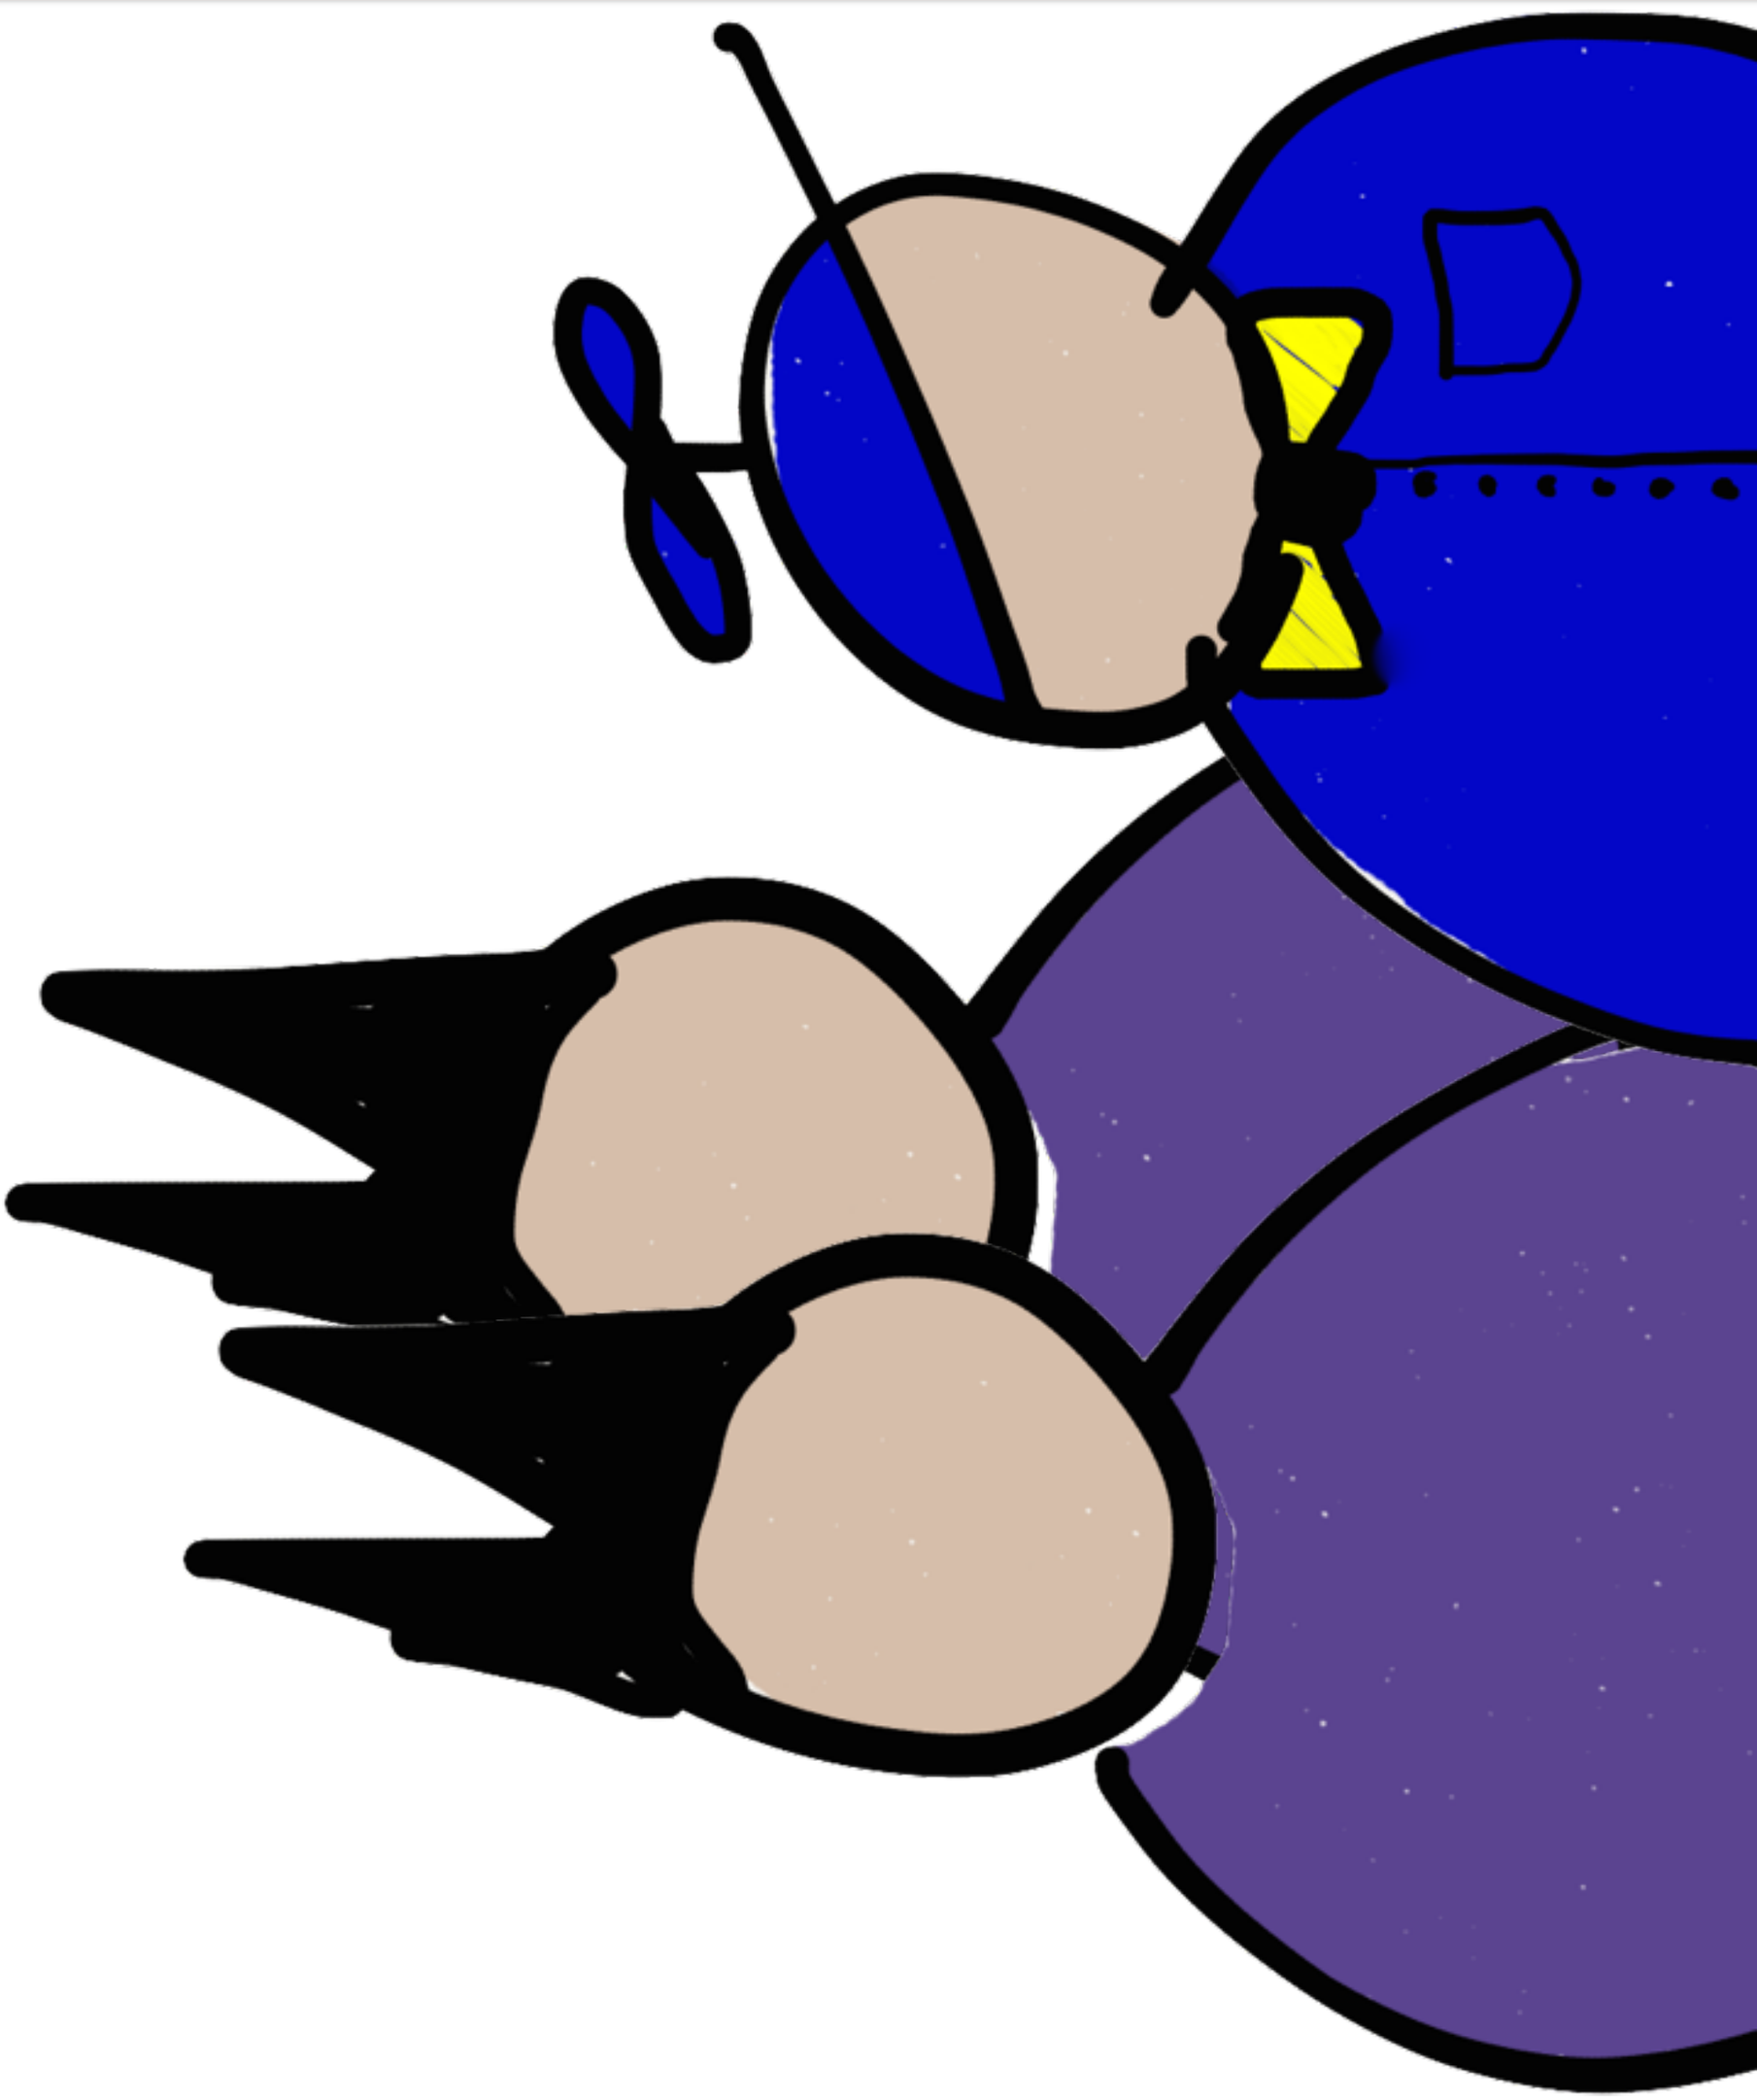
Look Familiar?



Look Familiar?



My test just broke because the developer changed an ID!

Look Familiar?

My test just broke because the database got refreshed!

Look Familiar?

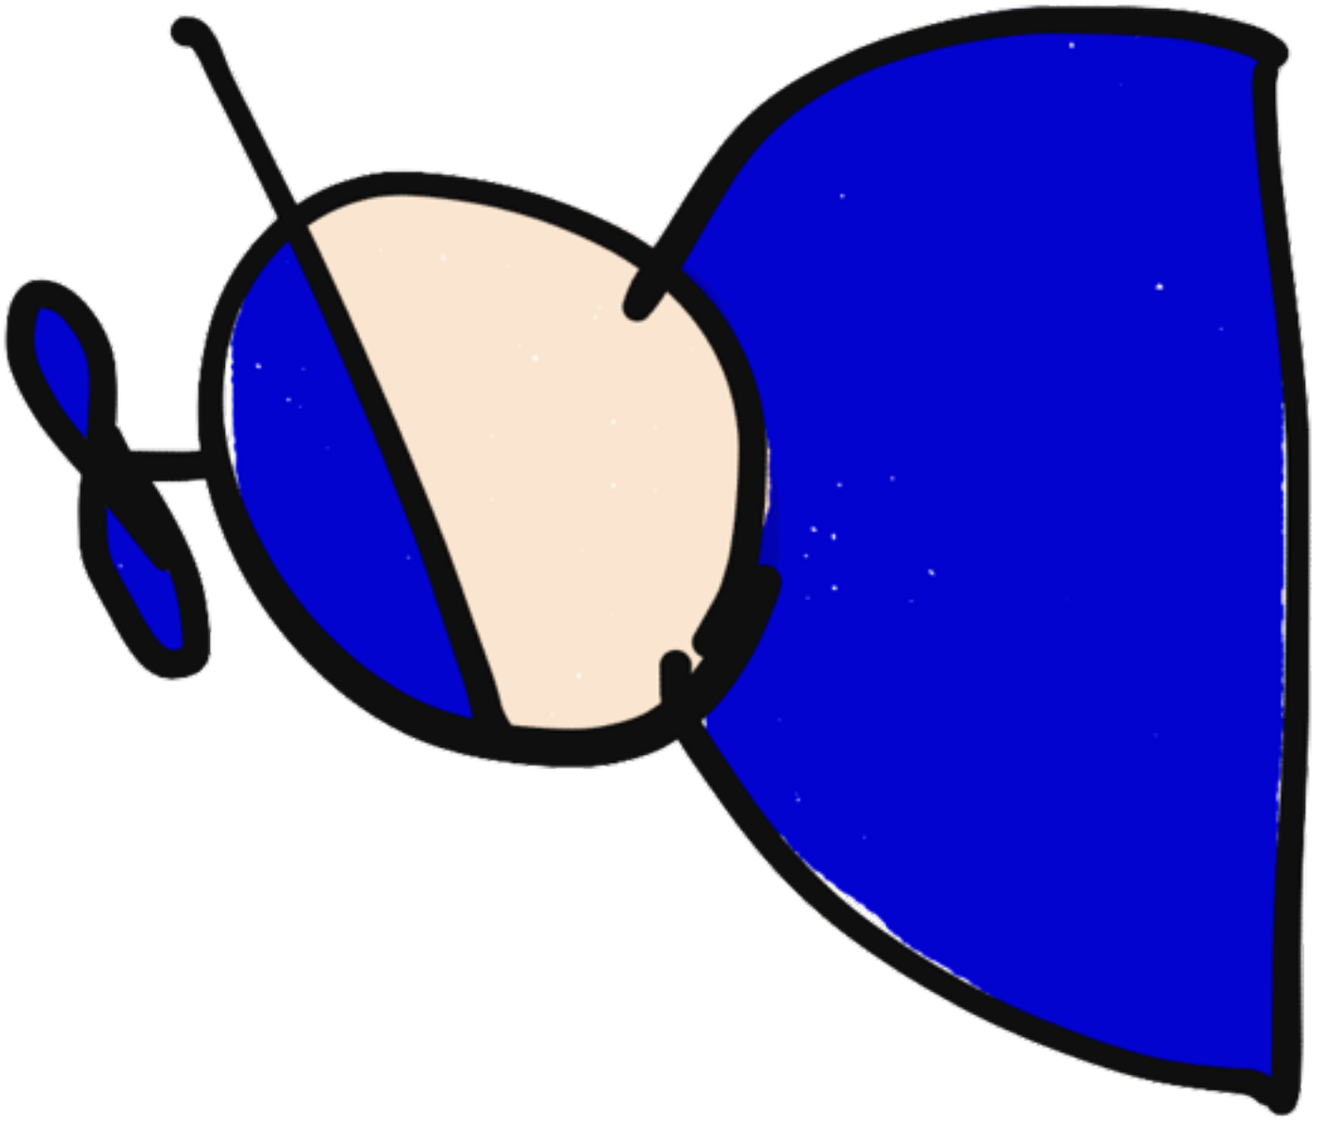
Oh. That is supposed to work that way? Ok. I'll fix the test...

Look Familiar?

What version of the tests work with version 4.3 of the code?

Look Familiar?

Algorithm Writers?



Developer as Tester?

Sharing Is Caring

Fill out the information on the sign-up forms at your tables if you want a more shareable version of this presentation or email me at bcarlso@leantechniques.co

Presentations these days are full of pictures and not any words. That's great for when you're at the conference taking in the information in person, but they just don't translate when you come back and explain it to your team.

That's why we've created s shareable version of this presentation, it contains all of the content from the live presentation, but in a more digestible format for taking offline and reviewing and sharing with your colleagues. All you've got to do is go to the link shown above and sign up. Once you've signed up, you'll receive the sharable version and any updates we make to the presentation moving forward.

Thanks for attending and let me know how you've leveraged data exhaust to improve your overall software delivery performance.

Thanks!

Brandon
